RE: Harrison County WV State Orphan Program Modification to Plugging Prognosis

Dear Landowner,

Please find enclosed an updated plugging prognosis for the following wells located on your property:

- 47-033-06078
- 47-033-06079
- 47-033-06081

If you wish to expedite the process and waive the standard 5-day waiting period, you may do so by signing and returning the enclosed Surface Owner Waiver.

Should you have any questions, comments, or require additional information, please don't hesitate to contact us using the information provided below.

Sincerely,

Permitting Supervisor

47-033-06079

This well is open topped 10" that has been measured to a depth of 259'. Fluid level at approximately 250'.

Due to the construction, depth and Landowners concerns of slip potential we propose plugging this well through the following procedure:

- A. Clear area directly around the well.
- B. Run 100' of 1.25" SDR7 plastic gas line to the well and install a tee with a valved clean up bypass at the wellhead and a valve to control the cement going down the pipe placed into well bore. The 1.25" SDR7 plastic gas line will be ran in the well to a depth just above 259'.
- C. Pump cement volume to fill from 259' to 20' (approximately 101 sks at 1.14 yield, 20.5 bbl of Class A/ Class L cement)
- D. Clean up lines and dispose of clean up water.
- E. Remainder of casing volume to be topped off with Sakrete and install monument.
