"The sand designated Speechley? etc., coming 2630 feet below the top of the Pittsburgh Coal, and 648 feet below the top of the Gordon Sand, appears to correlate with the horizon in which the oil showing was encountered in the Dobbs deep well (M-81).....This well is located nearly 1/2 mile west of a straight line joining the Dobbs deep well (M-81) and the Beggs Run deep well (M-7). With the exception of a light gas showing at the top of the Gordon Sand, the Wilson well (M-39) was dry, and abandoned by the company."
