March 20, 2014

WELL WORK PERMIT

Horizontal 6A Well

This permit, API Well Number: 47-5101716, issued to CHEVRON APPALACHIA, LLC, is evidence of permission granted to perform the specified well work at the location described on the attached pages and located on the attached plat, subject to the provisions of Chapter 22 of the West Virginia Code of 1931, as amended, and all rules and regulations promulgated thereunder, and to all conditions and provisions outlined in the pages attached hereto. Notification shall be given by the operator to the Oil and Gas Inspector at least 24 hours prior to the construction of roads, locations, and/or pits for any permitted work. In addition, the well operator shall notify the same inspector 24 hours before any actual well work is commenced and prior to running and cementing casing. Spills or emergency discharges must be promptly reported by the operator to 1-800-642-3074 and to the Oil and Gas inspector.

Please be advised that form WR-35, Well Operators Report of Well Work is to be submitted to this office within 90 days completion of permitted well work, as should form WR-34 Discharge Monitoring Report within 30 days of discharge of pits, if applicable. Failure to abide by all statutory and regulatory provisions governing all duties and operations hereunder may result in suspension or revocation of this permit and, in addition, may result in civil and/or criminal penalties being imposed upon the operators.

In addition to the applicable requirements of this permit, and the statutes and rules governing oil and gas activity in WV, this permit may contain specific conditions which must be followed. Permit conditions are attached to this cover letter.

Per 35CSR-4-5.2.g this permit will expire in two (2) years from the issue date unless permitted well work is commenced. If there are any questions, please feel free to contact me at (304) 926-0499 ext. 1654.

[Signature]
James Martin
Chief

Operator's Well No: FRANCIS 9H
Farm Name: WILLIAMS OHIO VALLEY MIDS]
API Well Number: 47-5101716
Permit Type: Horizontal 6A Well
Date Issued: 03/20/2014

Promoting a healthy environment.
PERMIT CONDITIONS

West Virginia Code § 22-6A-8(d) allows the Office of Oil and Gas to place specific conditions upon this permit. Permit conditions have the same effect as law. Failure to adhere to the specified permit conditions may result in enforcement action.

CONDITIONS

1. This proposed activity may require permit coverage from the United States Army Corps of Engineers (USACOE). Through this permit, you are hereby being advised to consult with USACOE regarding this proposed activity.

2. If the operator encounters an unanticipated void, or an anticipated void at an unanticipated depth, the operator shall notify the inspector within 24 hours. Modifications to the casing program may be necessary to comply with W. Va. Code § 22-6A-5a (12), which requires drilling to a minimum depth of thirty feet below the bottom of the void, and installing a minimum of twenty (20) feet of casing. Under no circumstance should the operator drill more than fifty (50) feet below the bottom of the void or install less than twenty (20) feet of casing below the bottom of the void.

3. When compacting fills, each lift before compaction shall not be more than 12 inches in height, and the moisture content of the fill material shall be within limits as determined by the Standard Proctor Density test of the actual soils used in specific engineered fill, ASTM D698, Standard Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort, to achieve 95% compaction of the optimum density. Each lift shall be tested for compaction, with a minimum of two tests per lift per acre of fill. All test results shall be maintained on site and available for review.

4. Operator shall install signage per § 22-6A-8g (6) (B) at all source water locations included in their approved water management plan within 24 hours of water management plan activation.

5. Oil and gas water supply wells will be registered with the Office of Oil and Gas and all such wells will be constructed and plugged in accordance with the standards of the Bureau for Public Health set forth in its Legislative rule entitled Water Well Regulations, 64 C.S.R. 19. Operator is to contact the Bureau of Public Health regarding permit requirements. In lieu of plugging, the operator may transfer the well to the surface owner upon agreement of the parties. All drinking water wells within fifteen hundred feet of the water supply well shall be flow tested by the operator upon request of the drinking well owner prior to operating the water supply well.

6. Pursuant to the requirements pertaining to the sampling of domestic water supply wells/springs the operator shall, no later than thirty (30) days after receipt of analytical data provide a written copy to the Chief and any of the users who may have requested such analyses.

7. If any explosion or other accident causing loss of life or serious personal injury occurs in or about a well or well work on a well, the well operator or its contractor shall give notice, stating the particulars of the explosion or accident, to the oil and gas inspector and the Chief, within 24 hours of said accident.

8. During the casing and cementing process, in the event cement does not return to the surface, the oil and gas inspector shall be notified within 24 hours.

03/21/2014
1) Well Operator: Chevron Appalachia, LLC 49449935 51 Clay

2) Operator's Well Number: 9H1 Well Pad Name: Francis

3) Elevation, current ground: 1263' Elevation, proposed post-construction: 1260'

4) Well Type: (a) Gas (b) If Gas: Shallow Deep
5) Existing Pad? Yes or No: YES

6) Proposed Target Formation(s), Depth(s), Anticipated Thicknesses and Associated Pressure(s):
   Marcellus 4323 psi, Upper Devonian 4134 psi, 6486'-6538', 50' anticipated thickness, overpressured

7) Proposed Total Vertical Depth: 6512'
8) Formation at Total Vertical Depth: MARCELLUS
9) Proposed Total Measured Depth: 11,920'
10) Approximate Fresh Water Strata Depths: 110-400'
11) Method to Determine Fresh Water Depth: Local stream base, offset well data, Francis 1 completion report
12) Approximate Saltwater Depths: 1242', 1300', 1910-2400'
13) Approximate Coal Seam Depths: 800', 1100'
14) Approximate Depth to Possible Void (coal mine, karst, other): None Anticipated
15) Does proposed well location contain coal seams directly overlying or adjacent to an active mine? If so, indicate name and depth of mine: Outside of and approx 230' adjacent to Ireland Mine

16) Describe proposed well work:
   Drill 17'-1/2" hole to 500' then run and cement 13-3/8" casing to surface covering the fresh water.
   Drill 12.25" hole to 2,580' then run and cement to surface 9 5/8" casing, covering the Berea. Drill 8 1/2" hole to KOP at 5,764'. Drill 8 1/2" curve and lateral to 11,920' MD and 6,512 TD. Run 5 1/2" production casing and cement back to surface. If a void is encountered: (see attachment)

17) Describe fracturing/stimulating methods in detail:
   Complete, the 10 Marcellus wells utilizing 300,000lbs of 40/70 each and frac'd at 100 ppm.

18) Total area to be disturbed, including roads, stockpile area, pits, etc, (acres): 7.0 acres approximate
19) Area to be disturbed for well pad only, less access road (acres): 2.0 acres

Page 1 of 3

03/21/2014
• If a void is encountered the contingency will be the following:
  o Once unexpected void is encountered drill 12-1/4” hole to 100’ below bottom of mine void.
  o Run 9-5/8”, 36 lb/ft, J-55 casing with cement basket 20’ above mine void.
  o Cement casing using displacement method to bottom of mine void using 100 percent excess.
  o Grout from surface to cement basket using whatever volume of cement is necessary to get cement to surface.
  o Drill 8-3/4” hole to 2580’.
  o Run 7”, 23 lb/ft, N-80 casing.
  o Cement casing to surface using the displacement method with 30% excess.
  o Drill 6-1/4” hole to TD.
  o Run 4-1/2” 13.5 lb/ft, P-110 casing to TD.
  o Cement to surface using displacement method with 10% excess

21) Describe centralizer placement for each casing string.

There will be a bow spring centralizer every two jts on the Water string and intermediate.
The production string will have two centralizer every jt in the lateral and curve, then one every two jts from KOP to surface.

22) Describe all cement additives associated with each cement type.

For the Water String the blend will contain class A cement, 3% CaCl2, and flake.
The intermediate will contain class A cement, 10% CaCl2, Salt, and flake.
The Production cement will have a lead, middle, and tail cement.
The lead will contain class A cement, KCl, dispersant, suspension agent, and retarder.
The middle will contain class A cement, KCl, dispersant, Aluminum Silicate, suspension agent, and retarder.
The tail will contain class A cement, Calcium Carbonate, KCl, dispersant, de-foamer, suspension agent, and friction reducer.

23) Proposed borehole conditioning procedures.

Well will be circulated a minimum of 3 bottoms up once casing point has been reached on all hole sections and until uniform mud properties are achieved.

*Note: Attach additional sheets as needed.

Do you anticipate using more than 5,000 bbls of water to complete the proposed well work? Yes [✓] No [ ]

Will a pit be used? Yes [ ] No [✓]

If so, please describe anticipated pit wastes: n/a

Will a synthetic liner be used in the pit? Yes [ ] No [✓]

If so, what ml? [ ]

Proposed Disposal Method For Treated Pit Wastes:

- [ ] Land Application
- [ ] Underground Injection (UIC Permit Number: [ ])
- [ ] Reuse (at API Number: [ ])
- [ ] Off-Site Disposal (Supply Form WW-9 for disposal location)
- [ ] Other (Explain)

Will closed loop system be used? Yes [ ] No [ ]

Drilling medium anticipated for this well (vertical and horizontal)? Air, freshwater, oil based, etc.

- [ ] - Oil based, what type? Synthetic, petroleum, etc.

Additives to be used in drilling medium? Emulsifiers, weighting agents, organophilic clays, barite, calcium chloride (or similar phase of invert) gilsonite

Drill cuttings disposal method? Leave in pit, land fill, removed offsite, etc., removed offsite

- [ ] If left in pit and plan to solidify what medium will be used? (cement, lime, sand, etc.) N/A

- [ ] Landfill or offsite name/permit number: [ ]

I certify that I understand and agree to the terms and conditions of the GENERAL WATER POLLUTION PERMIT issued on August 1, 2005, by the Office of Oil and Gas of the West Virginia Department of Environmental Protection. I understand that the provisions of the permit are enforceable by law. Violations of any term or condition of the general permit and/or other applicable law or regulation can lead to enforcement action.

I certify under penalty of law that I have personally examined and am familiar with the information submitted on this application form and all attachments thereto and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that I may be subject to civil and criminal penalties for submitting false information, including the possibility of fine or imprisonment.
