280 PETROLEUM, NATURAL GAS, AND COMMERCIAL COAL.

of Ohio, comprising the Helderberg, Salina, and Niagara Series, outcrop along the Browns Mountain Anticline in a broken and greatly mashed condition, so that these horizons at this locality are entirely eliminated. Along the western limits of the county these formations lie at such depths below the surface as to render their prospects quite impracticable.

The White Medina Sandstone, which is known as the "Clinton" Sand in southeastern Ohio where it is a productive sand, outcrops along the Browns Mountain Anticline, where it is broken and squeezed, being 50 to 150 feet in thickness and very hard and quartzitic. In the western portion of the county this horizon lies below the general depth reached by the present methods of drilling.

OIL AND GAS WELL RECORDS.

In Pocahontas County only two wells have been drilled for oil, neither of which obtained any production, although a show of oil was reported in the Pocahontas Coal and Land Company's No. 1 (No. 1 on Map II) well. The record of this well, a copy of which was kindly furnished by Mr. Hubert Echols, of Marlinton, a Director of the Company, and earlier published in the Webster County Report, is included with the Big Spruce Knob Section, and can be seen on pages 103-4. Some changes in correlation in the lower part of this record have been made in this report. This well was drilled on the lands of the Pocahontas Coal and Land Company, along Williams River slightly southwest of Big Spruce Knob, where the strata are rising rapidly to the east, with all the horizons penetrated being exposed at the surface a few miles farther east so that any hope of finding either oil or gas is very remote.

The remaining well that was drilled for oil in this county was the ~~Green Bank No. 1~~ (No. 2 on Map II), located one-fourth mile southwest of Green Bank. The well was reported drilled by J. J. De Ran, of Bel Air, Maryland, and Charles Hines, of Baltimore, Maryland, to a depth of 800 to 900 feet. The date of the drilling is not known but the bull-wheel remains at the location at this date.
