## WELL WORK PLUGGING PERMIT

## Plugging

This permit, API Well Number: 47-8300106, issued to US DEPARTMENT OF INTERIOR - BLM, is evidence of permission granted to perform the specified well work at the location described on the attached pages and located on the attached plat, subject to the provisions of Chapter 22 of the West Virginia Code of 1931, as amended, and all rules and regulations promulgated thereunder, and to all conditions and provisions outlined in the pages attached hereto. Notification shall be given by the operator to the Oil and Gas Inspector at least 24 hours prior to the construction of roads, locations, and/or pits for any permitted work. In addition, the well operator shall notify the same inspector 24 hours before any actual well work is commenced and prior to running and cementing casing. Spills or emergency discharges must be promptly reported by the operator to 1-800-642-3074 and to the Oil and Gas inspector.

Upon completion of the plugging well work, the above named operator will reclaim the site according to the provisions of WV Code 22-6-30. The above named operator will also file, as required in WV Code 22-6-23, an affidavit on form WR-38 by two experienced persons in the operator's employment and the Oil and Gas inspector that the work authorized under this permit was performed and a description given. Failure to abide by all statutory and regulatory provisions governing all duties and operations here under may result in suspensions or revocation of this permit and in addition may result in civil and/or criminal penalities being imposed upon the operator.

This permit will expire in two (2) years from date of issue. If there are any questions,

please free to contact me at (304) 926-0499 ext. 1654.

James Martin

Chief

Operator's Well No: BW-1

Farm Name: U S DEPT OF INT

API Well Number: 47-8300106

Permit Type: Plugging
Date Issued: 07/22/2016

## **PERMIT CONDITIONS**

West Virginia Code § 22-6-11 allows the Office of Oil and Gas to place specific conditions upon this permit. Permit conditions have the same effect as law. <u>Failure to adhere to the specified permit conditions may result in enforcement action.</u>

## **CONDITIONS**

- 1. All pits must be lined with a minimum of 20 mil thickness synthetic liner.
- 2. In the event of an accident or explosion causing loss of life or serious personal injury in or about the well or while working on the well, the well operator or its contractor shall give notice, stating the particulars of the accident or explosion, to the oil and gas inspector and the Chief within twenty-four (24) hours.
- 3. Well work activities shall not constitute a hazard to the safety of persons.

```
ADDENDUM
WORK ONDER for Randolph 106
```

After water is diverted and site prep is complete:

Establish pit and lay plastic under rig and all equipment to prevent any spill of contents inside well

Move rig and plugging equipment on site, spot plugging equipment, and rig up

Check TD, if TD is high, begin cherry picking contents to determine what substance is in the well to determine the proper procedure

If power swiveling needs completed to reach TD, hook up swivel and begin drilling.

· SPOT. GEL

Set bottom hole plug from 7053' to 6853', check top of cement and top off as needed.

Set 6% gel spacer as needed From 4053' To 2100'.

Set plug at elevation 2100' to 1900', check top of cement and top off as needed.

Set 6% gel spacer as needed From 1900' To 992'

Set plug at casing shoe 900' to 700', check top of cement and top off as needed.

Set 6% gel spacer as needed To 200'.

Set 200' surface plug, check top of cement and top off as needed.

Set monument to WV-DEP specifications

SET OFFSET MARKER (MONIMENT)
PER WY STATE CORE.

Remove all waste from site

Rig down and reclaim area with BLM required seed

July 21, 2016

Jeffrey W. McLaughlin West Virginia Department of Environmental Protection Office of Oil and Gas 601 57<sup>th</sup> Street SE Charleston, WV 25304 MONUMENT MARKEN VARIANCE REQUEST

Dear Mr. McLaughlin,

The United States Department of Interior, Bureau of Land Management, Northeastern District Office hereby requests a variance on the requirement of a 30 inch marker in the stream associated with the re-plugging of the Randolph 106 well on the Monongahela National Forest in Randolph County, Dry Fork District, West Virginia. This stream is an active stream prone to flash flood conditions which have the power to move excessive amounts of stone. Our request is to place a plate and monument marker on top of the plug at a depth of 24 inches below current water bottom and then restore the distance from the top of the plate to the water bottom with soil and river rock found in the Glady Fork Stream channel. This particular river is a favorite spot for anglers, especially those who fly fish. It is our desire to maintain the river in as close to natural state as possible. Therefore, we request a variance to place the plate and monument marker below grade and then to offset survey the location and place a surface marker delineating the exact location of the re-plugged well. We propose the placement of the offset marker on the island adjacent to the re-plugged well location.

If you have any additional questions, please contact Theresa M. Bodus at (414) 297-4420.

Sincerely,

Musica M Bodis

Theresa M. Bodus

Assistant District Manager - Minerals

The Office of Oil and Gas is granting a general variance to the requirements under 35CSR4-5.5b of erecting a monument upon the plugging of certain wells. If granted, the following conditions will be met:

- the well will be surveyed and a plat constructed as required under 22-6 of the WV Code and 35CSR4,
  - a readily visible, permanent offset marker, in as close proximity as reasonably possible, will be erected and will provide distance and bearing information to the plugged well,
- the plugging affidavit (form WR-38), will document the absence of a monument at the well location and document the existence and location of the offset marker,
  - 4) a steel plate no smaller that one square foot shall be affixed to the well casing no deeper than three feet below the ground surface and be inscribed with the api number of the well.

To qualify under the general variance, an operator may make a variance request to the Chief of the Office of Oil and Gas for a specific well(s) in conjunction with a showing of good cause by the surface owner.

THE ABOVE-REFERENCED MONUMENT MARKER VARIANCE! HAS BEEN GRANTED FOR THE PLUCGING OF API WELL # 47-083-00106.

PLEASE, MAKE SURE THAT A NEW PLAT IS TURNED IN WITH THE WR-38 THAT WAS THE COORDINATES OF THE WELL AND THE OFFSET MARKER, SO THAT ONE REFERENCES THE OTHER.

March 8, 1961

Mr. Charles Chalasso, President Holly Gil and Gos Corporation 405 Lexington Avenue New York 17, New York

#### Dear Mr. Chaisano:

You end I discussed your proposed operations on Federal oil and gas lease HEM-A-C46842 at Elkins, Fest Virginia on April 1, 1959. You were notonpanied by Dr. Smirnow and Leonard Hart. Er. Hart has advised so that he no longer is employed by your company.

Subsequent thereto, you drilled well BV-1 on Tract 26 c of said lease to a depth of 7,053 feet. I understand that operations were suspended on June 21, 1959 and that the hole is standing full of Beroid and with a cap welded on the 13 3/8 inch easing pending a decision as to whether to drill deeper or plug and abandon.

I would appreciate being informed as to whether you have decided on a future course of action with respect to this well.

Sincerely yours,

Robert E. Speer

Robert E. Speer Oil and Ges Supervisor Eastern Region

## INSPECTION Monongahela National Forest- Orphan Well

## Randolph 106 Well, Dated: 07/17/14

The water level in the casing was ~4.5 inches above the water level of the stream. There were NO noticeable gas bubbles escaping from the casing into the stream. There were a significant amount of small air bubbles continually surfacing in the water within the water within the water level, the assessment.

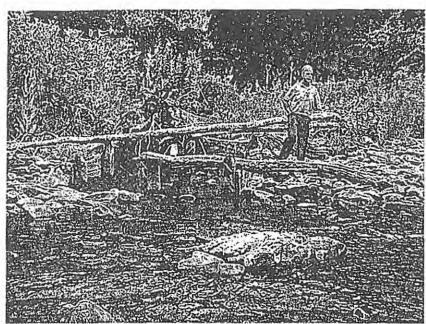

Water levels 07/17/14; finger shows the level of water in the well casing

At the last field assessment of the well on 06/03/14, the water level of the well and stream were about the same. The water level of the stream was about ~4-4.5 inches higher (about the same height as the current water level in the well). There were also noticeable gas bubbles that were entering the stream every few seconds and then dissipating. These bubbles seemed to be escaping from somewhere low in the casing under the water, but no noticeable holes were seen.

Randolph 106/BW-1 well bore on the east bank of the Glady Fork stream channel. Rodney Dillon, WVDEP Office of Oil and Gas, looking at the well, July 7, 2005.

Randolph 106/BW-1 well bore in Glady Fork on July 7, 2005. Well bore has a gas discharge, also small amounts of oil produce sheen on the water inside and outside the wooden cellar.

## INSTRUCTIONS TO COAL OPERATORS OWNERS AND LESSEE

The well operator named on the obverse side of WW-4 (B) is about to abandon the well described in the enclosed materials and will commence the work of plugging and abandoning said well on the date the inspector is notified. Which date shall not be less then five days after the day on which this notice and application so mailed is received, or in due course should be received by the Department of Environmental Protection Office of Oil & Gas.

This notice and application is given to you in order that your respective representatives may be present at the plugging and filling of said well. You are further notified that whether you are represented or not the operator will proceed to plug and fill said well in the manner required by Section 24, Article 6, Chapter 22 of the Code and given in detail on obverse side of this application.

NOTE: If you wish this well to be plugged according to 22-6-24(d) then as per Regulation 35CSR4-13.9 you must complete and return to this office on form OB-16 "Request by Coal Operator, Owner, or Lessee for plugging" prior to the issuance of this plugging permit.

## SURFACE OWNER WAIVER

Operator's Well Number

Randolph 106

## INSTRUCTIONS TO SURFACE OWNERS NAMED ON PAGE WW4-A

The well operator named on page WW-4A is applying for a permit from the State to plug and abandon a well. (Note: If the surface tract is owned by more than three persons, then these materials were served on you because your name appeared on the Sheriff's tax ticket on the land or because you actually occupy the surface tract. In either case, you may be the only owner who will actually receive these materials.) See Chapter 22 of the West Virginia Code. Well work permits are valid for 24 months. If you do not own any interest in the surface tract, please forward these materials to the true owner immediately if you know who it is. Also, please notify the well operator

NOTE: YOU ARE NOT REQUIRED TO FILE ANY COMMENT. WHERE TO FILE COMMENTS AND OBTAIN ADDITIONAL INFORMATION:

> Chief, Office of Oil and Gas Department of Environmental Protection 601 57th St. SE Charleston, WV 25304 (304) 926-0450

Time Limits and methods for filing comments. The law requires these materials to be served on or before the date the operator files his Application. You have FIVE (5) DAYS after the filing date to file your comments. Comments must be filed in person or received in the mail by the Chief's office by the time stated above. You may call the Chief's office to be sure of the date. Check with your postmaster to ensure adequate delivery time or to arrange special expedited handling. If you have been contacted by the well operator and you have signed a "voluntary statement of no objection" to the planned work described in these materials, then the permit may be issued at any time.

Comments must be in writing. Your comments must include your name, address and telephone number, the well operator's name and well number and the approximate location of the proposed well site including district and county from the application. You may add other documents, such as sketches, maps or photographs to support

The Chief has the power to deny or condition a well work permit based on comments on the following grounds:

- The proposed well work will constitute a hazard to the safety of persons.
- 2) The soil erosion and sediment control plan is not adequate or effective;
- Damage would occur to publicly owned lands or resources;
- 4) The proposed well work fails to protect fresh water sources or supplies;
- 5) The applicant has committed a substantial violation of a previous permit or a substantial violation of one or more of the rules promulgated under Chapter 22, and has failed to abate or seek review of the

If you want a copy of the permit as it is issued or a copy of the order denying the permit, you should request a copy from the Chief.

VOLUNTARY STATEMENT OF NO OBJECTION

I hereby state that I have read the instructions to surface owners and that I have received copies of a Notice and Application For A Permit To Plug And Abandon on Forms WW-4A and WW-4B, and a survey plat.

I further state that I have no objection to the planned work described in these materials, and I have no objection to a permit being issued on those materials. FOR EXECUTION BY A NATURAL PERSON FOR EXECUTION BY A CORPORATION, ETC. . Date //19/16 Name

7/19/16 Deris C. Nelson, Netary Lublic.

## PERFORMANCE WORK STATEMENT

#### Section C

## DESCRIPTION/SPECIFICATIONS/STATEMENT OF WORK

## C.1 SCOPE OF WORK

The Contractor shall provide all personnel, equipment, tools, materials, supervision, and other items and incidental services necessary, except for those designated as Government-Furnished Property to perform the plugging of the Randolph 106 Well as described in this Performance Work Statement (PWS). This plugging operation will be an all-inclusive "lump sum" payment for all services rendered.

These services are to be performed at the well location in Randolph County on the Monongahela National Forest, West Virginia on Tract 26c. The well is 7,053 deep and has been previously plugged with bentonite gel in July 26, 1962 and capped with a welded metal cap. The well may be listed in the West Virginia database as the Well No. BW-1.

## C.2 <u>DEFINITIONS</u>

#### C.2.1 General Definitions

- 1. Site Restoration: Includes work and equipment necessary to (1) Remove and dispose of equipment, structures, trash, and well fluids from the well site; and (2) Perform specified backfilling, regarding, seeding and mulching of the well site and access road to the satisfaction of the BLM.
- 2. Work Day: A workday is considered to be 10 hours. The Contractor will designate the starting hour for the work day at the pre-work conference. This shall be the designated start time each day for the workday unless the Contractor submits a written request for a change to the Contracting Officer Representative (COR).
- 3. Rig Hour: A rig hour is considered to be 1/10<sup>th</sup> of a work day.
  - a. Operating Hour Rate: The dollar rate per hour for the rig with 3-man crew and supervision while the rig is being used to perform work on the well. With a lump sum charge hourly operating rates do not apply.
  - b. Standby Hour Rate: The dollar rate per hour for the rig with crew while the rig is not being used to perform work on the wells such as waiting on cement or during BLM evaluation and not due to mechanical failure or breakdown. With a lump sum charge, standby rates do not apply.

- 4. Equipment Breakdown: Rig or associated equipment not capable of being used to perform work on the well due to mechanical failure or breakdown. With a lump sum charge, the breakdown concerns are bore by the contractor.
- 5. Equipment malfunction or Unavailability: BLM will not pay for time charged to equipment while it is unavailable.
- 6. Access Road: An unimproved road established to provide ingress or egress to the well sites.
- 7. Trash: Items of debris or rubbish of an unsalvageable nature not occurring naturally on the well site. Trash does not include hazardous materials found or contained on the well site.
- 8. Well Fluids: Oil, water or drilling/plugging fluids circulated from the well during plugging operations.
- 9. Anticipated Bottom Hole Pressure: This pressure shall be determined form available information including but not limited to completion and production test, drill stem test, or mud weight gradient. Lacking better data, bottom hole pressure shall be determined with a formation pressure gradient of 0.44 to 0.50 psi per foot of depth.

#### C2.2 References

- Code of Federal Regulations (CFR): Title 29 CFR Parts 1910/1926 Construction Industry-OSHA 2207
- 2. Code of Federal Regulations (CFR):
  Title 43 CFR Part 3160; Onshore Oil and Gas Order No. 2 Drilling Operations:
  Section III-G Drilling Abandonment Requirements

#### C2.3 Submittals

- 1. Certification, verification or Listings: Submit written certification from the manufacturer or a verification that the Contractor-Furnished materials, products and equipment conform to the requirements of this section. Verification submittal shall include a listing with the manufacturers' name, type, size, capacity, and quantity for the following:
  - a. Daily Well Work Report
  - b. Cementing equipment if a third party service.
  - c. Cement and additives in list format
  - d. Drilling mud and additives in a list format

#### C2.4 Well Information

1. Location: The well is the Randolph 106, West Virginia. The well is located in the Glady Fork Stream Channel. The lat long is 2640' south of Lat 39 degrees 00' and 780 feet west

of longitude 79 degrees and 35. The pipe remains above ground and presents a hazard to the public as well as to fishermen. The well is to be plugged and the site restored. Access and mobilization is from existing Sate and Forest roads and then through a campsite. The site will be accessed through a staging site to be built for plugging.

## C2.5 Federal Plugging requirements

- 1. All cement plugs except surface, will have a slurry volume to fill 100 feet plus 10% slurry for every 1000 feet of depth.
- 2. Cement plugs shall be a minimum of 50 feet above and 50 feet below the top and bottom perforations. Cement plug will be tagged to ensure adequate strength and placement.
- 3. If the casing is cut and pulled, a cement plug shall be placed at the casing stub. A minimum of 50 feet above and 50 feet below the casing stub.
- 4. Any zones that contain fluid with potential to migrate or valuable resources (I.e. usable water, hydrocarbons, coal, oil shale etc.) in an open hole will have a cement plug extending a minimum of 50 feet above and 50 feet below the zones.
- 5. A cement plug, with a minimum of 50 feet of cement above and 50 feet of cement below, shall be placed at the surface shoe.
- 6. Intervals between plugs shall have a fluid of sufficient density to exert hydrostatic pressure exceeding the greatest formation pressure encountered while drilling through that interval. A minimum of 9 ppg fluid is required.
- 7. If the integrity of any plug is questionable, it must be tagged to ensure strength and adequate placement.
- 8. For the surface plug, a minimum of 50 feet of cement will be placed in the smallest casing and all annuli that extend to the surface.
- 9. For the surface cap, the casing should be cut off at the base of the cellar or three feet below the final restored ground level whichever is deeper.
- 10. Water, fluids and drilling muds used or created during the plugging process will be stored in one or more steel tanks onsite. Surface waste pits or drilling pits are not available at this site.

11. A registered saltwater (brine) hauler will remove the waste for disposal at a West Virginia approved site. There is no authorization to "land apply" or discharge any fluids onto the surrounding land surface under a West Virginia Statewide permit.

#### C2.6 Site Restoration

- 1. Remove surface well equipment, structures, piping, and trash associated with the oil and gas well and plugging operations including all other materials let by operators at this location.
- 2. Mitigation of soil erosion shall be required on all access roads and project areas around the access to the well pad site. The use of filter fabric is not permitted.
- 3. The following mix and guidelines are to be used for all re-vegetation and seeding of the disturbed areas.
  - a. Apply lime to establish a surface pH of 5.5 to 6.0 based on a soil pH test, or apply 2 tons per acre ground limestone.
  - **b.** Apply fertilizer according to a soil analysis, or at a rate of 600 pounds of 10-20-10 or equivalent.
  - c. Seed mix:
    - Virginia wild rye (*Elymus virginicus*) 8 lbs/acre
    - Tioga deer tongue (Panicum clandestinum) 8 lbs/acre
    - Bottlebrush grass (Elymus hystrix) 4 lbs/acre
    - Silky wildrye (*Elymus villosus*) 8 lbs/acre
    - Canada wildrye (Elymus Canadensis) 8 lbs. acre
    - Annual rye
       4 lbs/acre
  - d. Apply straw mulch at a rate of 2 tons per acre.
- 4. Trees may be trimmed for access. Tree removal requires the approval of the Monogohalia National Forest.
- 5. All construction or earth moving equipment shall be washed prior to entering the project area to prevent the introduction of invasive species.

## C2.7 Miscellaneous Other Information

- 1. Work must begin within 270 days of contract award date timing in conjunction with the BLM.
- 2. A plugging permit secured by the contractor with the State of West Virginia will be required prior to plugging.

- 3. The Contractor must take reasonable measure such as posting notices or signs within the project area to notify the public of operations that may pose safety concerns. The project area is within the Monongahela National Forest and is open to the public. Public safety is important.
- 4. Payment will be rendered upon completion of the job.
- 5. The period of performance is one year.
