

Northern West Virginia

Pennsylvania

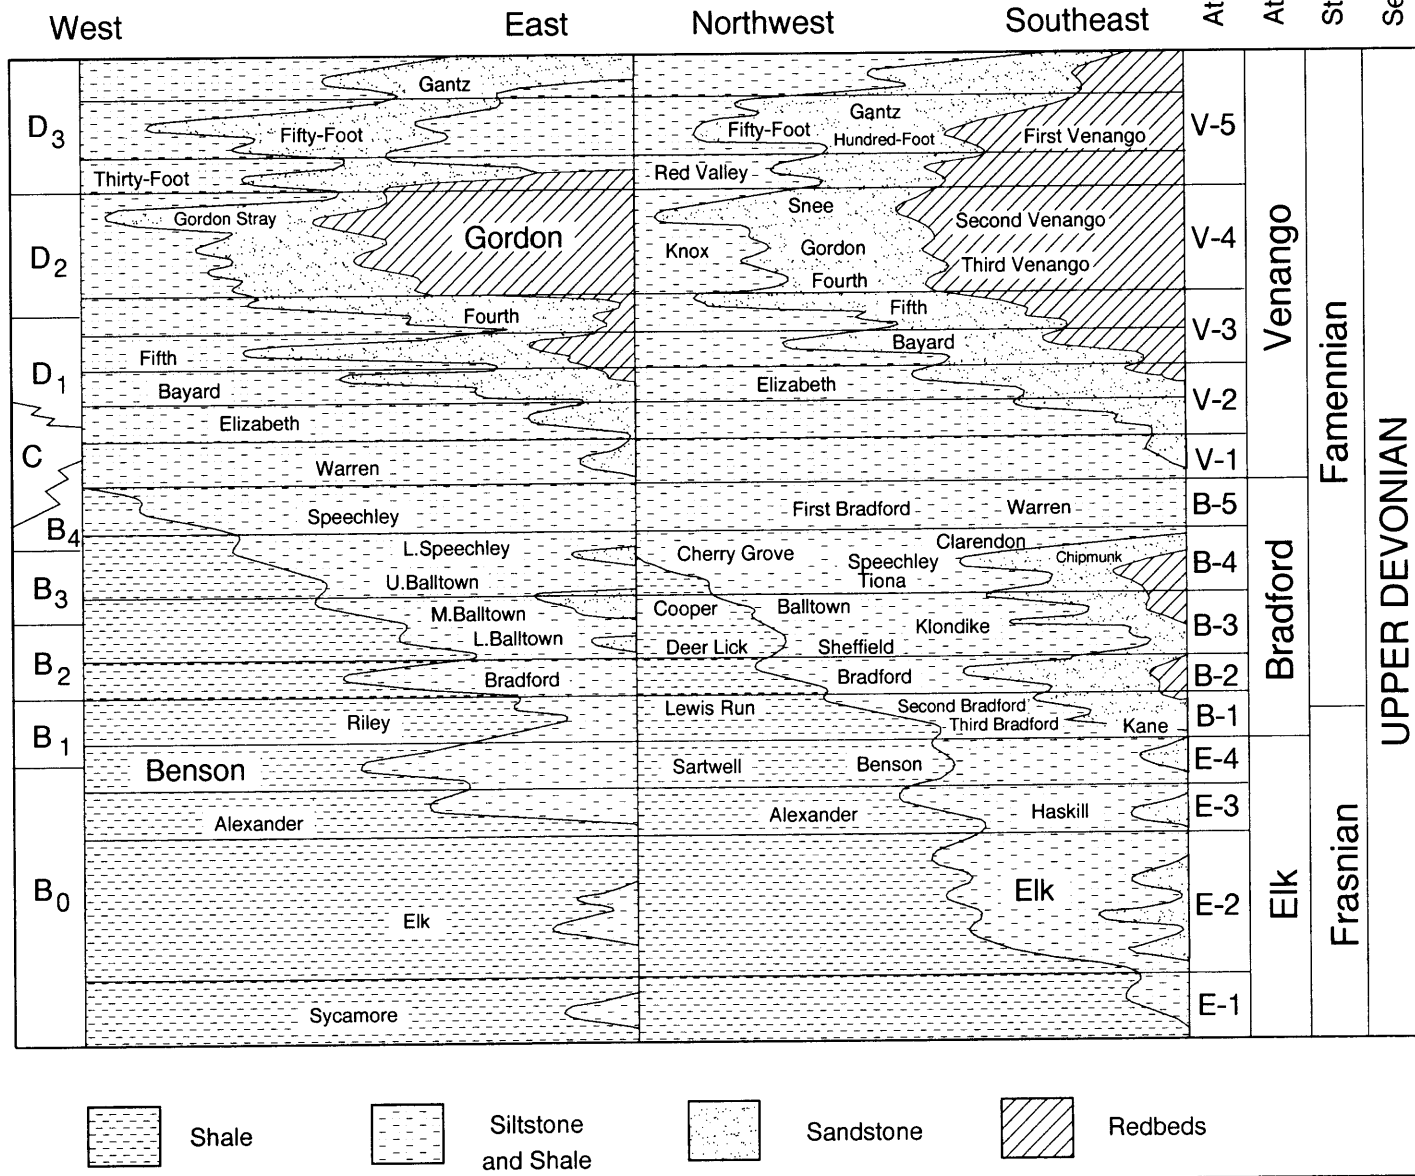

Figure Dbs-7. The sequence and approximate correlation of major drillers' sands in the subsurface of western Pennsylvania and northern West Virginia. Because the Bradford reservoirs have a longer and more successful production history in Pennsylvania, a more complex terminology has developed in that area. Pennsylvania correlations taken largely after Fettke (1938b), Dickey and others (1943), Wolfe (1963), and Harper and Laughrey (1987). West Virginia correlations after Cardwell (1982a), Filer (1985), and Boswell and others (1987). Far left column shows terminology introduced by Kelley and Wagner (1970). (Boswell and others, 1996-Dbs)
